Free eye surgeries

With the aid and assistance from Vision Beyond Aus, trained eye specialists visited all schools in the Namobuddha Municipality in Nepal throughout August and September for a Children's Eye Camp. The specialists travelled over some rough territory throughout the municipality visiting children between the ages of 6 and 18 and providing general eye check-ups. 135 pairs of glasses were handed out to children throughout the camps. Due to Covid-19, school students have been on online learning, making it very difficult for those children with eye disease to continue with their studies. Vision Beyond Aus is continuing to provide financial support to enable appropriate surgery to be provided to those in need in Nepal.

WHERE WE ARE

Countries

Correcting vision impairment and blindness is crucial to people living in India, Myanmar, Cambodia, Nepal and Ethiopia.

DETAILS

CASE STUDY

Yorn - 81 years old

Yorn is a retired farmer and proud grandfather. He lives with his wife and his youngest daughter, who is also a farmer.

Eight years ago, Yorn developed a cataract in his left eye, causing him blurred vision, sensitivity to light, and irritation. He has difficulty seeing things clearly, recognizing faces, and going anywhere outside.

When Yorn learned about Children's Surgical Centre, he traveled there with his daughter seeking treatment. On May 14th, doctors performed a small incision cataract surgery and an intraocular lens implant in his left eye. After recovery, he will be able to see clearly.

Yorn shared, "I hope that after my surgery my daughter will not have to do so much work to help me."

Objective - Restore the sight of 100,000 of the world's most desperately disadvantaged people who would have no other way to see again.
