Free eye surgeries

What is the surgical procedure and how long does it take?

A: The cataract surgery performed in the eye camp is exactly the same way it is performed in any Western country. We take all the precautions for sterilising the clinics, theatre and pre and post surgery areas.

The patients undergo a detailed assessment prior to surgery and all the presurgical check-ups are done. Good quality machines are used to remove the cataract, by phaco emulsification technique which is used in Australia. Patients have the cataract surgery with lens implantation by highly trained and experienced surgeons.

WHERE WE ARE

Countries

Correcting vision impairment and blindness is crucial to people living in India, Myanmar, Cambodia, Nepal and Ethiopia.

DETAILS

CASE STUDY

U Narayana Murthy Rao - 59 years

A retired sugar factory worker, now doing daily wages to support his family, wife and three daughters. He is the only bread winner.

He sustained injury to his left eye while working and could not come immediately as they are basically on a hand to mouth sustenance. However after a period of two weeks the pain was unbearable and he presented here. O/E he was found to have a large corneal ulcer with impending perforation. An emergency Penetrating Corneal Transplant was done and post op he is doing well.

Objective - Restore the sight of 100,000 of the world's most desperately disadvantaged people who would have no other way to see again.
